Hi Peter,

I told Nicholas Steenhaut (Ramboll Environ) that I sent the project information out to the Delaware River Fish and Wildlife Management Cooperative's Fisheries Technical Committee for comments. I'll get you a response as soon as I can.

Thanks,
Michelle

Michelle,

I am sending you additional information regarding the phone message I left for you yesterday about the Delaware River and any fish restrictions on construction work at a Superfund Site. The construction work planned at the Metal Bank Superfund Site in Philadelphia (at the east end of Cottman Avenue) involves placing boulders at the foot of a concrete retaining wall because that wall has developed cracks. I have not seen plans, but the remedial project manager (EPA) indicates the boulders would not extend very far out from the base of the wall (e.g. 30-50 feet). According to the EPA RPM, they hoped to due this construction project in April-May 2016. Therefore, he would like if this is possible as soon as possible. You can reach me via email and mobile phone ([206-617-5440](tel:206-617-5440)). I was hoping for an answer by Friday, Jan. 22, 2013...before the snow storm disrupts our lives. Thank you for your consideration. Peter
